Happy Valentine's Day!

Dr. Pat & Staff

**XEOMIN (similar to BOTOX)
ONLY \$11 /unit
(save \$5 /unit)**

To fix frown lines & worry lines

Xeomin is the newest "frown fixer" available to patients across the country. Pronounced zee-oh-min, this new product acts like its predecessors Botox and Dysport in reducing or preventing contractions of the glabellar muscle between the eyes.

How is Xeomin different from Botox or Dysport?

The difference in Xeomin (incobotulinumtoxinA) is that it does not carry the proteins that are typical of the other products. The potential advantage lies in the lessened likelihood of antibodies being formed to the proteins which - for a very limited number of patients - can render the product ineffective.

How is Xeomin similar to Botox or Dysport?

The muscle-restricting action is, for all practical purposes, like

**WOMEN'S
HEALTH**

February is
Heart Health
Awareness Month

Botox and Dysport and the dosing is the same as Botox.

Why would I choose Xeomin over the injectables already available for a longer period of time?

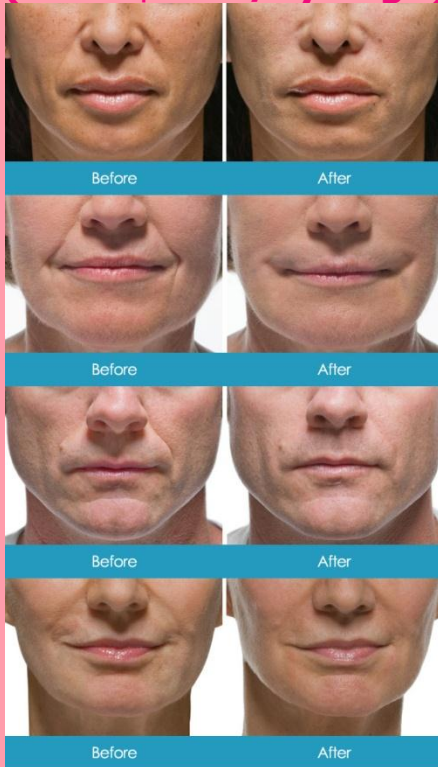

It's reported quicker effect could be one reason. We frequently use both Dysport and Botox in a single session to achieve desired results. We will do the same with Xeomin. As time goes on, it will be the patients preference on which to choose.

How fast does Xeomin work?

Although still very new to the U.S. market, Xeomin is reported to begin taking effect within 2-3 days after injection with effectiveness ranging up to 4 months.

RADIESSE

**ONLY \$450 /syringe
(save \$100 /syringe)**

For the treatment of moderate or severe facial wrinkles and folds

If you're looking for IMMEDIATE & long-lasting correction, then a facial filler may be the right treatment for you. As skin ages it reduces production of Hyaluronic acid (natural hydration) which in turn causes wrinkles and folds. Injectable Facial Fillers replace the HA your skin has lost, bringing back it's volume and smoothing away wrinkles. It's a quick in-office procedure that produces immediate results!

***NEW* SkinTyte**

Skin Tightening Procedure

What is SkinTyte?

The SkinTyte treatment is based on the principle of selective thermolysis and utilizes pulsed light technology to deeply heat your skin while cooling and protecting the entire treated surface. SkinTyte can be provided quickly and comfortably with no downtime. The end result is a more youthful appearance. SkinTyte treatments are safe for all skin colors and can be performed on any area of the body where an improvement in your skin firmness is desired. Popular areas include the face, neck, abdomen and arms.

How it works

The SkinTyte procedure utilizes infrared energy to deeply heat dermal collagen. This process promotes partial denaturation and contraction of collagen. The heat also initiates the body's natural healing process, which creates a renewed collagen foundation leading to increased skin firmness. Powerful cooling maintains the outer surface of your skin at a cool temperature before, during, and after each pulse providing you a comfortable and safe procedure.

During treatment

The SkinTyte light energy is delivered in a sequence of rapid, gentle pulses. There is no need for a topical anesthetic, however, the physician may choose to use one on more sensitive areas. A series of pulses will be repeated over the treatment area to ensure best results. While the face and neck can typically be treated within 30 minutes, the actual time will depend on the area treated.

The number of treatments needed will vary from patient to patient and the physician can personalize a treatment plan based on the level of improvement you desire. The physician may also combine SkinTyte with other popular aesthetic procedures to further personalize your treatment.

After treatment

You may experience some mild redness in the treated area immediately after treatment and this should return to normal within minutes. Since the SkinTyte procedure is noninvasive, there is no downtime so you can resume regular activities immediately following treatment. You can also apply makeup and sunscreen after each session.

No special skin care regimen is required following treatment. However, you should always protect your skin from direct sun exposure and use a good sunscreen. The physician can also recommend an at home skin care regimen if desired.

SkinTyte procedure results may vary from patient to patient. The SkinTyte procedure is recommended for patients who desire moderate, noticeable skin improvement without having to undergo surgery. Full results often take up to four months as the collagen foundation of your skin is rebuilt and strengthened.

FREE Clarity Pro Skin Analysis

Your skin analysis session takes only a few minutes after which we will discuss your skin goals, go through your results and recommend the best skin care treatment plan or aesthetic procedures designed specifically for you!

Among the many variables that contribute to the total condition of your complexion, these are critical to choosing the right skin care treatments. Using the latest technology, we will evaluate your skin's health and appearance based on the following criteria:

- UV damage and sun damage susceptibility
- Skin type classification
- Complexion health - complexion score, pigment evenness, redness levels, skin radiance.
- Pore Health - to calculate acne risk and inflammation
- Pore Size
- Skin Tone - evenness measurements and color variation
- Wrinkle map - emerging lines, fine lines, deep lines
- Moisture analysis - assess moisture and dryness in skin
- Wrinkle Analysis - classification according to severity level

The results of your Clarity™ Pro Skin Analysis enables us to tailor a treatment plan so you can use appropriate skin care products and prevent any further damage to your skin.
